

1. The first group of respondents (Group 1) consisted of 100 individuals who were randomly selected from the general population. They were surveyed via telephone interviews.

2. The second group (Group 2) consisted of 150 individuals who were recruited from local community centers and public libraries. They were surveyed via paper questionnaires.

3. The third group (Group 3) consisted of 200 individuals who were recruited from a local university's psychology department. They were surveyed via online surveys.

4. The fourth group (Group 4) consisted of 120 individuals who were recruited from a local hospital's patient database. They were surveyed via mail questionnaires.

5. The fifth group (Group 5) consisted of 80 individuals who were recruited from a local church's membership list. They were surveyed via telephone interviews.

6. The sixth group (Group 6) consisted of 90 individuals who were recruited from a local government office's employee list. They were surveyed via paper questionnaires.

7. The seventh group (Group 7) consisted of 110 individuals who were recruited from a local business's customer list. They were surveyed via online surveys.

8. The eighth group (Group 8) consisted of 130 individuals who were recruited from a local sports team's fan base. They were surveyed via mail questionnaires.

9. The ninth group (Group 9) consisted of 140 individuals who were recruited from a local social club's membership list. They were surveyed via telephone interviews.

10. The tenth group (Group 10) consisted of 160 individuals who were recruited from a local government office's public service list. They were surveyed via paper questionnaires.
